

HOW RISING TEMPERATURES AFFECT FILIPINOS

The Philippines' average temperature has increased by approximately 0.6°C since the 1950s, and temperatures are projected to continue to increase through the century.

**AGRICULTURE,
LIVELIHOODS,
FOOD**

YIELD LOSSES

from extreme weather (rising temperatures accelerates evaporation, causing stronger rain)

**HEALTH+
HUMAN
ACTIVITIES**

HEALTH RISKS

High heat indices trigger heat exhaustion, dehydration, and heatstroke

Excessive workplace heat cuts down active working hours, especially for informal and outdoor labor

CLIMATE INEQUALITY

Wealthy individuals and regions can easily afford protective infrastructure, air conditioning, and green technology

Poorer and low latitude countries are the most vulnerable

BACHELOR OF SCIENCE IN ENVIRONMENTAL SCIENCE

Interdisciplinary approach:
Combines biology, chemistry, geology,
physics, economics, and social sciences

Explores ecological processes,
environmental issues, pollution control,
and resource management

Includes laboratory work, research
projects, and field studies

STUDENT POPULATIONS IN ATENEO DE DAVAO UNIVERSITY
